AWS Essentials-Project 2

Step 1 : First step is to choose an image for the instance (i.e Ubuntu image)

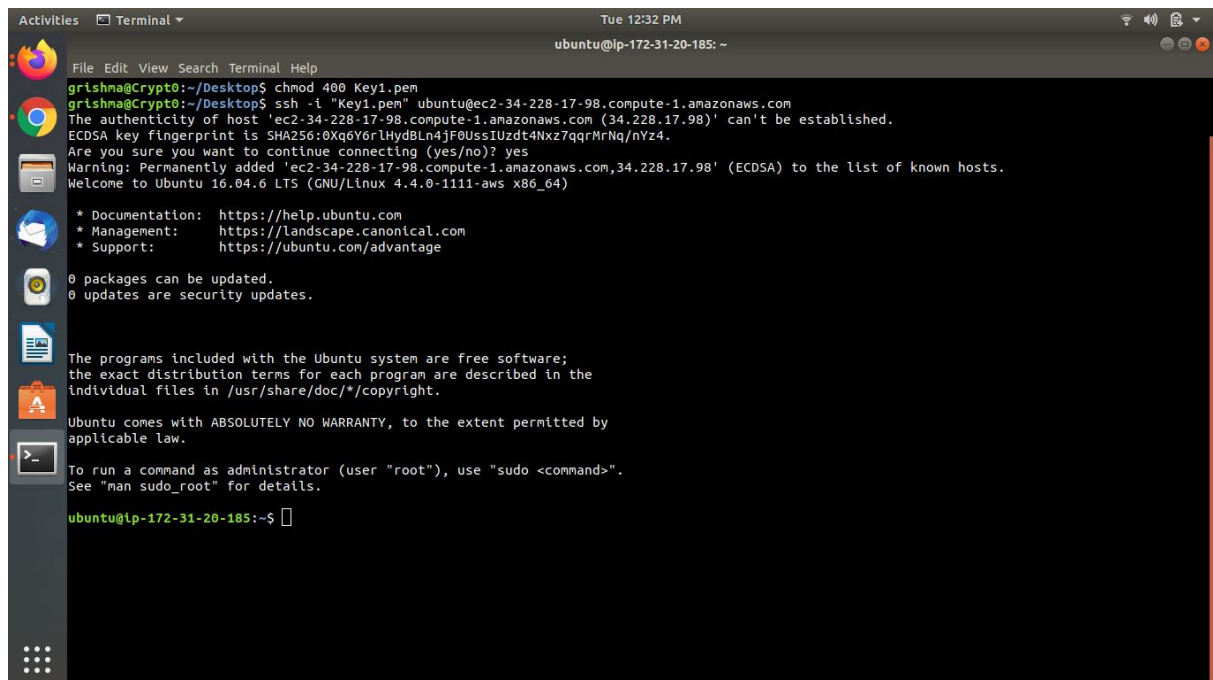

Step 2 : Then follow all the steps and configure the instance according the requirements and at the end review and launch the instance
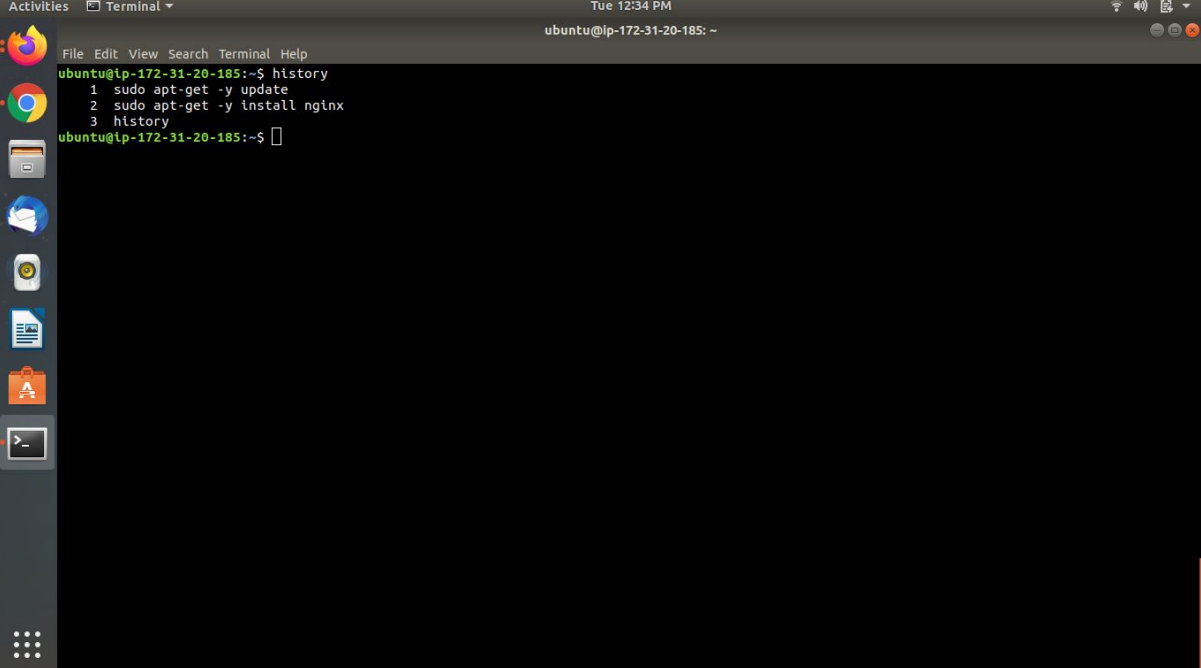

Step 3 : Since my local machine is an ubuntu machine, I don't need to install MOBAXTERMS. I have connected to the instance through ssh

Step 4 : To install nginx run the following commands:
sudo apt-get –y update
sudo apt-get –y install nginx

Step 5 : To check if the nginx is installed successfully, use the public ip of the instance for verification
